

Reward and Recognition

Mario Valdebenito Rodas

The Core Data Science for Managers team went above and beyond collaborating with HUIT, faculty, and a variety of stakeholders to ensure the EC pilot of Google Colab and its full RC implementation and additional technologies, including ChatGPT Pro, Code Interpreter, Solstice, and to support the new RC DSM course. The collaborative spirit of this team helped to bring the faculty members' vision to fruition. The core project team was able to accomplish this through solution exploration, testing, getting feedback from faculty, RAs, and additional support staff, and collaborating with colleagues in HUIT and across HBS IT and MBA. This team has been able to implement existing and emerging technologies to meet the innovative spirit of this new course.
